

## Excellence and Compliance Management Software

### ISOSYSTEM

The true business value of automated corporate management emerges when it transforms an organization's operations to best meet the specific needs of its industry. Changing the way organizations do business requires not only a powerful and flexible technology platform to accommodate the wide range of business requirements, challenges, and goals, but also a deep understanding of the process and regulatory realities of the industries in which customers operate.

Organizations in highly regulated industries such as energy, automotive and healthcare, face pressures to balance the demand for increased output with those of reducing costs and ensuring regulatory compliance. Striking this balance demands a shift in the way organizations think about business content.

Most organizations work in competitive and controlled business environments. Their challenge is to deploy business solutions that mitigate risk, streamline processes, manage

and improve financial performance and identify and implement opportunities to improve and continually advance the organization.

This is where SoftExpert can help. Our ISOSYSTEM product is the most complete web solution on the market. ISOSYSTEM consists of 18 modules that encompass all aspects of corporate excellence management. Its easy-to-use interface makes it simple for organizations to streamline their work processes and share information among their employees, business partners and customers. We have built our business by addressing customer needs with products that set the standard for out-of-the-box functionality and with service that sets the standard for responsiveness, honesty and integrity.

ISOSYSTEM can deliver a competitive advantage to any organization by assuring visibility, driving operational excellence, and enhancing stakeholder value.
